

QUALITY ASSURANCE REQUIREMENTS

Certified Material Test Report (CMTR) identifying and reporting the results of all chemical and physical tests furnished by the manufacturer are required. The CMTR submitted will be subject to technical review and approval by the purchaser. One copy of the test report is required to accompany the material.

Any material submitted without a CMTR will be processed as nonconforming material.

NOTE: If the order is for HEX socket products, (i.e., cap screws, set screws, etc.), no CMTR is required, provided the material is received in a sealed manufacturer's package that references a lot number and/or a traceable certificate number.
